82771.P279

ABSTRACT OF THE DISCLOSURE

An apparatus comprising a network interface, through which the apparatus facilitates communication between a client device and a remote device and a controller is presented. In accordance with one aspect of the present invention, the controller, coupled to the network interface, dynamically creates and removes admission filters based, at least in part, on an admissions profile that, when triggered, the filter(s) initiate an admission control decision preventing premature allocation of resources which are not used or authorized.
